Office Action Summary

Application No.

10/026,905

Applicant(s)

HIGASHI, SEIICHIRO

Examiner

Amare Mengistu

Art Unit

2673

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 23 April 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 22-44 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 22-44 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION
Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 22-44 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The specification as originally filed has failed to disclose the recited claimed inventions “***the first data line driving circuit being a line sequential driver***”; “***the second data line driving circuit having a plurality of switches, the plurality of switches being connected to one of the plurality of data lines and being turned on sequentially***”. The disclosure as originally filed does not teach one skill in the art how to make a display device having a first and a second data line driving where *the first data line driving circuit being a line sequential driver* and the *second data line driving circuit having a plurality of switches, the plurality of switches being connected to one of the plurality of data lines and being turned on sequentially*.

Art Unit: 2673

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 22-24,27-29,36-44 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Kanatani et al** (5,412,397) in view of **Shimada et al** (5,576,730).

As to claims 22-24,27-29, 36-44 **Kanatani et al** discloses a display device, comprising: a plurality of scan lines (fig.1 (11)); a plurality of data lines (fig.1 (12)); a display matrix comprising a plurality of pixels (col.3, lines 26-39); a first data line driving circuit (fig.1 (3)); a second data driving circuit (fig.1 (4)); the first data line driving circuit (fig.1 (3)) connectable to at least one of the plurality of data lines through one end of the at least one of the data lines (fig. 1 (12)); the first data line driving circuit being a line sequential driver (see, fig.3, col.5, lines 9-36); the second data line driving circuit (fig.1 (4)) connectable to the at least one of the plurality of data lines through the other end of the at least one of the plurality of the data lines (fig.1 (12)) ; at least one of the plurality of data lines (fig.1 (12)) connectable to both of the first data line driving circuit (fig.1(3)) and the second data line driving circuit (fig.1 (4)).

Kanatani et al has failed to teach that *the second data line driving circuit having a plurality of switches, each switches being connected to of one of the plurality of the*

Art Unit: 2673

data lines and being turned on sequentially, each of the plurality of switches being turned on in response to a single pulse. However, the patent **Shimada et al** clearly teaches it is well known for a second data line driving circuit (fig.1 (6)) having a plurality of switches (fig.1 (7)), each switches connected to one of the plurality of the data lines (fig.1 (2)) and being turned on sequentially (col.2, lines 9-21, col.8, lines 37-40, col.9, lines 15-18).

Therefore, it would have been obvious to one skill in the art at the time of the invention was made to have incorporated the switch system to turn ON sequentially as taught by **Shimada et al** into the display device of **Kanatani et al** because this an advantage to the active matrix substrate and method for inspecting the same according to which signal charges can be measured with a high S/N ration with a little influence of nose, a fluctuation in the potential of an external signal line accompanied by the ON/OFF operation of switches can be reduced to a minimum extent.

5. Claim 25, 26, 30 and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Kanatani** in view of **Shimada et al** and **Usui** (4,816,816).

As to 25, 26, 30, 33, **Kanatani** as modified by **Shimada et al** clearly teaches a plurality of scan lines (fig.1 (11)); a plurality of data lines (fig.1 (12)); a first data line driver (fig.1 (3)); a second data line driver (fig.1 (4)). A first scan line driver (fig.1 (2)). **Kanatani** has failed to teach at least one of the pluralities of scan lines connectable to a first and second scan line-driving circuit. However, the patent of **Usui** clearly discloses at least one of the plurality of scan lines connectable to a first and second scan line

Art Unit: 2673

driving circuit (4 (33,35)); a plurality of scan line disposed between the first and the second scan line drivers (see, figs.1 and 2); the first and second data line drivers having a function of outputting a digital data signals (fig.2 (31 and 29 outputting a digital data DB, and DA), the first data line driving circuit being a line sequential driver (see, figs.5 and 7). It is inherent for **Usui's** display matrix to have a plurality of pixels at the intersection of scan lines and data lines.

Therefore it would have been obvious to one skill in the art at the time of the invention was made to have been motivated to combine the teachings of **Usui's** having two scan line driving circuits in to the system of **Kanatani**, because this will allow the display system of **Kanatani** to scan the data using two scanning drivers so that the data can be scanned and displayed faster.

6. Claims 31,32,34 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Kanatani** in view of **Shimada et al and Usui** (4,816,816) further in view of **Youn** (5,856,816) and **Maekawa Toshiazu** (EP 0 678,848).

In regard to claims 31,32,34 and 35; **Kanatani** as modified by **Shimada et al and Usui** discloses a first data line and a second data line driving circuit's drivers to output an analog data signals (fig.4 (24)), but has failed to teach (a) a first latch, a second latch and D/A. (b) first data lines and second data lines outputting a digital signals.

Youn is cited to teach (a) a first and a second latches (fig.5 (25a, 25b)) and D/A converter (fig.5 (27)).

Therefore it would have been obvious to one skill in the art at the time of the invention was made to have used the two latches of **Youn** into the device of **Kanatani** because this will allow **Kanatani's** device to store the information date temporarily and outputting when the information is needed.

The patent of **Toshiazu** teaches that it is outputting a digital data signals, (see, col.1, lines 54- col.2, lines 6).

Therefore, it would have been obvious to one skill in the art at the time of the invention was made to have been motivated to use the driving an analog data signals of **Toshiazu** with the digital data driving system of **Kanatani** since this is an advantage to **Usui's** device to provide the ability of displaying both digital and analog data signals.

Response to Arguments

7. Applicant's arguments with respect to claims 22-44 have been considered but are moot in view of the new ground(s) of rejection.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amare Mengistu whose telephone number is (703) 305-4880. The examiner can normally be reached on M-F, T-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin Shalwala can be reached on (703) 305-4938. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9314 for regular communications and (703) 872-9314 for After Final communications.

Art Unit: 2673

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-9600.

A handwritten signature in black ink, appearing to read "Amare Mengistu", with a stylized flourish at the end.
